

# **Effects of NIBRS on Crime Statistics**

**BJS Special Report  
by Ramona R. Rantala, BJS**

**with technical support from  
Thomas J. Edwards, FBI**

# Purpose of Study

- Initial purpose - to research the effect of NIBRS on assault rate estimates
- Discovered interesting reporting patterns for other types of crime

# Issues to Be Addressed

- Hierarchy rule suppresses less serious offenses
- Misapplication of Hierarchy Rule
- More accurate reporting
- Definitions: changes or restructuring
  - Rape
  - Burglary
  - Assault
- Counting differences between states
- Role of data processing in maintaining uniformity of reporting

# Characteristics of Summary UCR Data

- Consists of monthly aggregate crime counts for eight Index crimes
- Records one offense per incident as determined by *hierarchy rule*
- Does not distinguish between attempted and completed crimes, except for forcible rape
- Records rape of females only
- Collects weapon information for murder, robbery, and aggravated assault
- Provides counts on arrests for the 8 Index crimes and 21 other offenses

# Characteristics of NIBRS Data

- Consists of individual incident records for the 8 Index crimes and 38 other offenses
- Records each offense occurring in incident
- Distinguishes between attempted and completed crimes
- Records rape of male victims by female offenders
- Restructures definition of assault
- Collects weapon information for all violent offenses
- Provides details on arrests for the 8 Index crimes and 49 other offenses

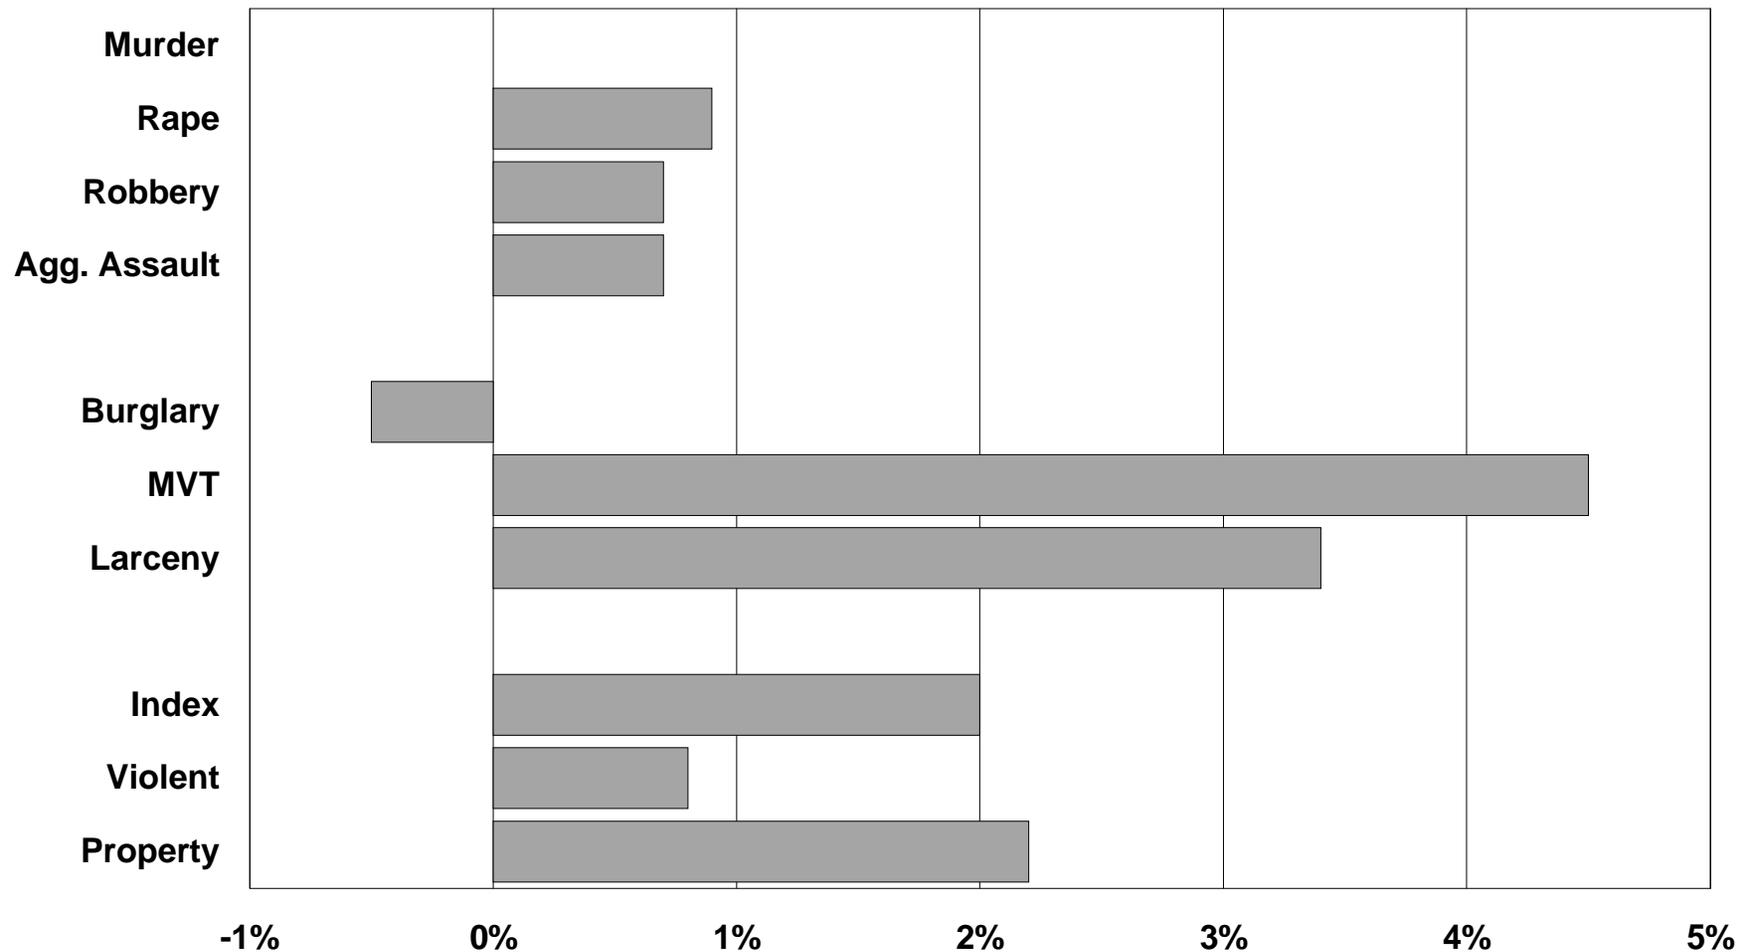

# Source of NIBRS Data

- FBI provided NIBRS offense counts aggregated by agency for years 1991 to 1996
- Every offense segment is included in the NIBRS count
- FBI converted NIBRS to Summary UCR
- BJS selected agencies with
  - full year NIBRS reporting
  - nonzero populations
  - 4068 cases met selection criteria
- FBI provided NIBRS incident files for 1996
- FBI edits for certain crime combinations began in 1997 and were not run on this data

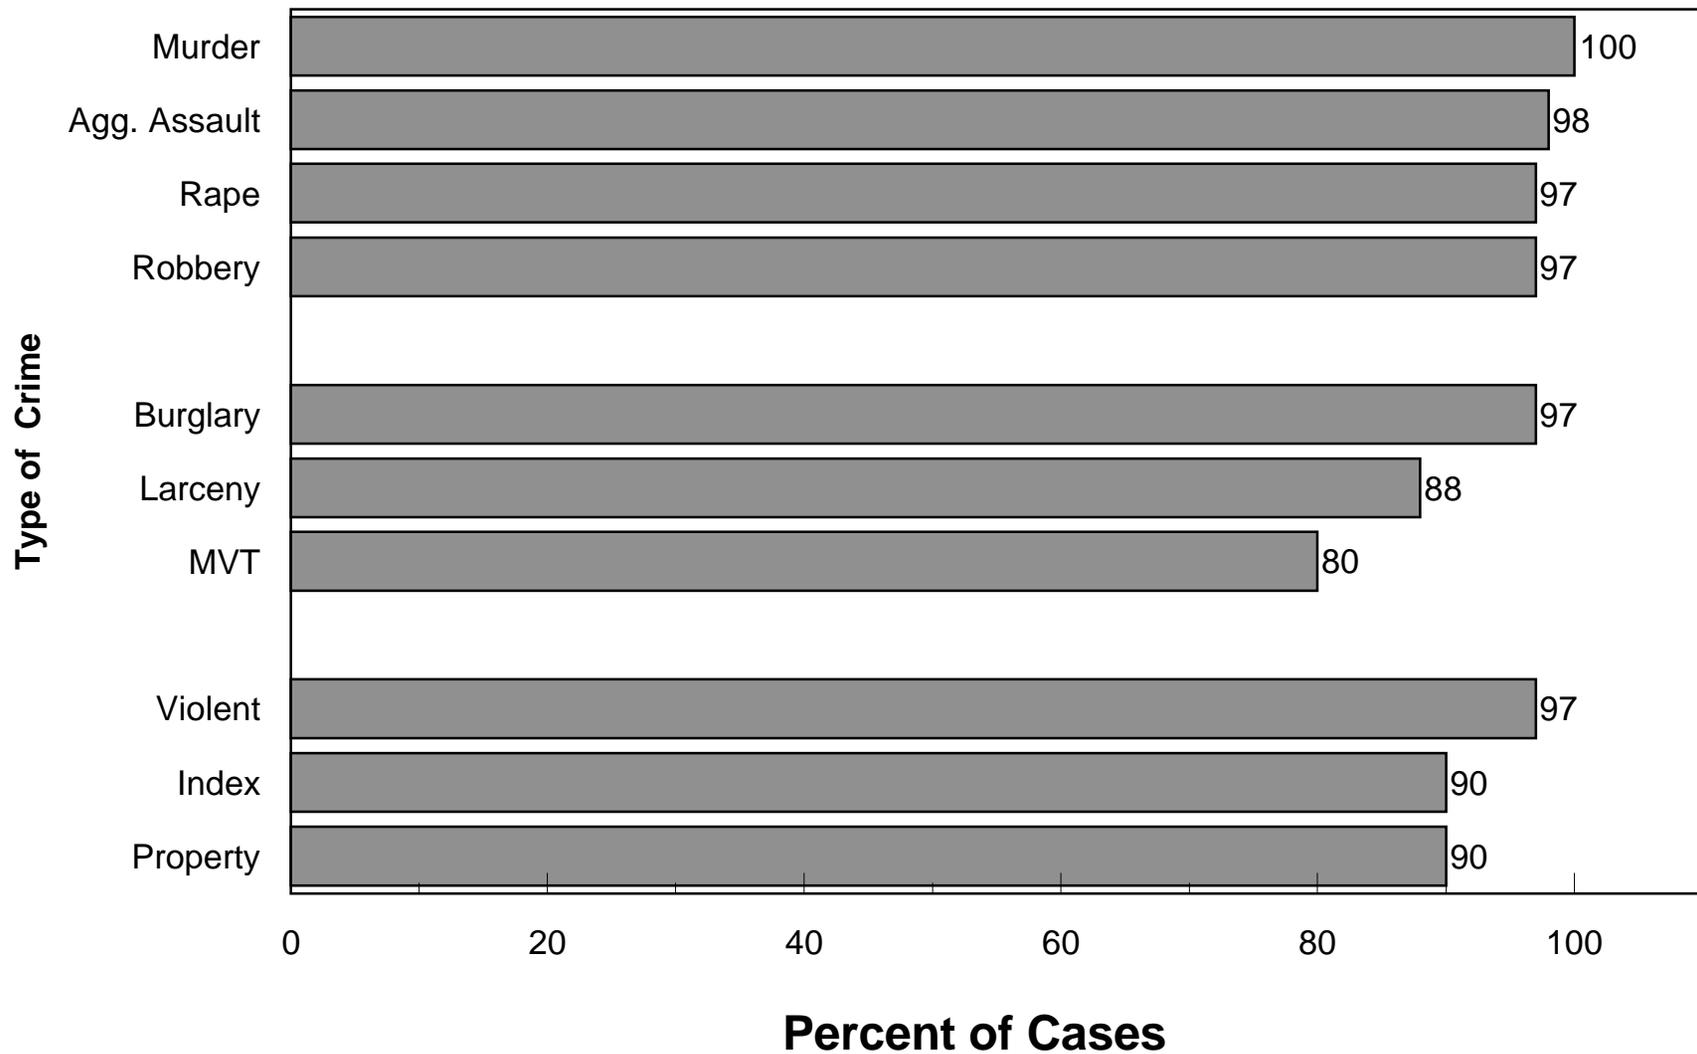

# Basis for Calculations

- Cases consist of both NIBRS and Summary UCR aggregate crime counts within an agency for each year between 1991 and 1996 that the agency reported 12 months of NIBRS data
- Percent change represents:  
$$100 \times \frac{\text{NIBRS Rate} - \text{Summary Rate}}{\text{Summary Rate}}$$
- Percentages are rounded

# Average Percent Difference in Crime Rate Estimates When Reported through NIBRS Rather Than Summary UCR

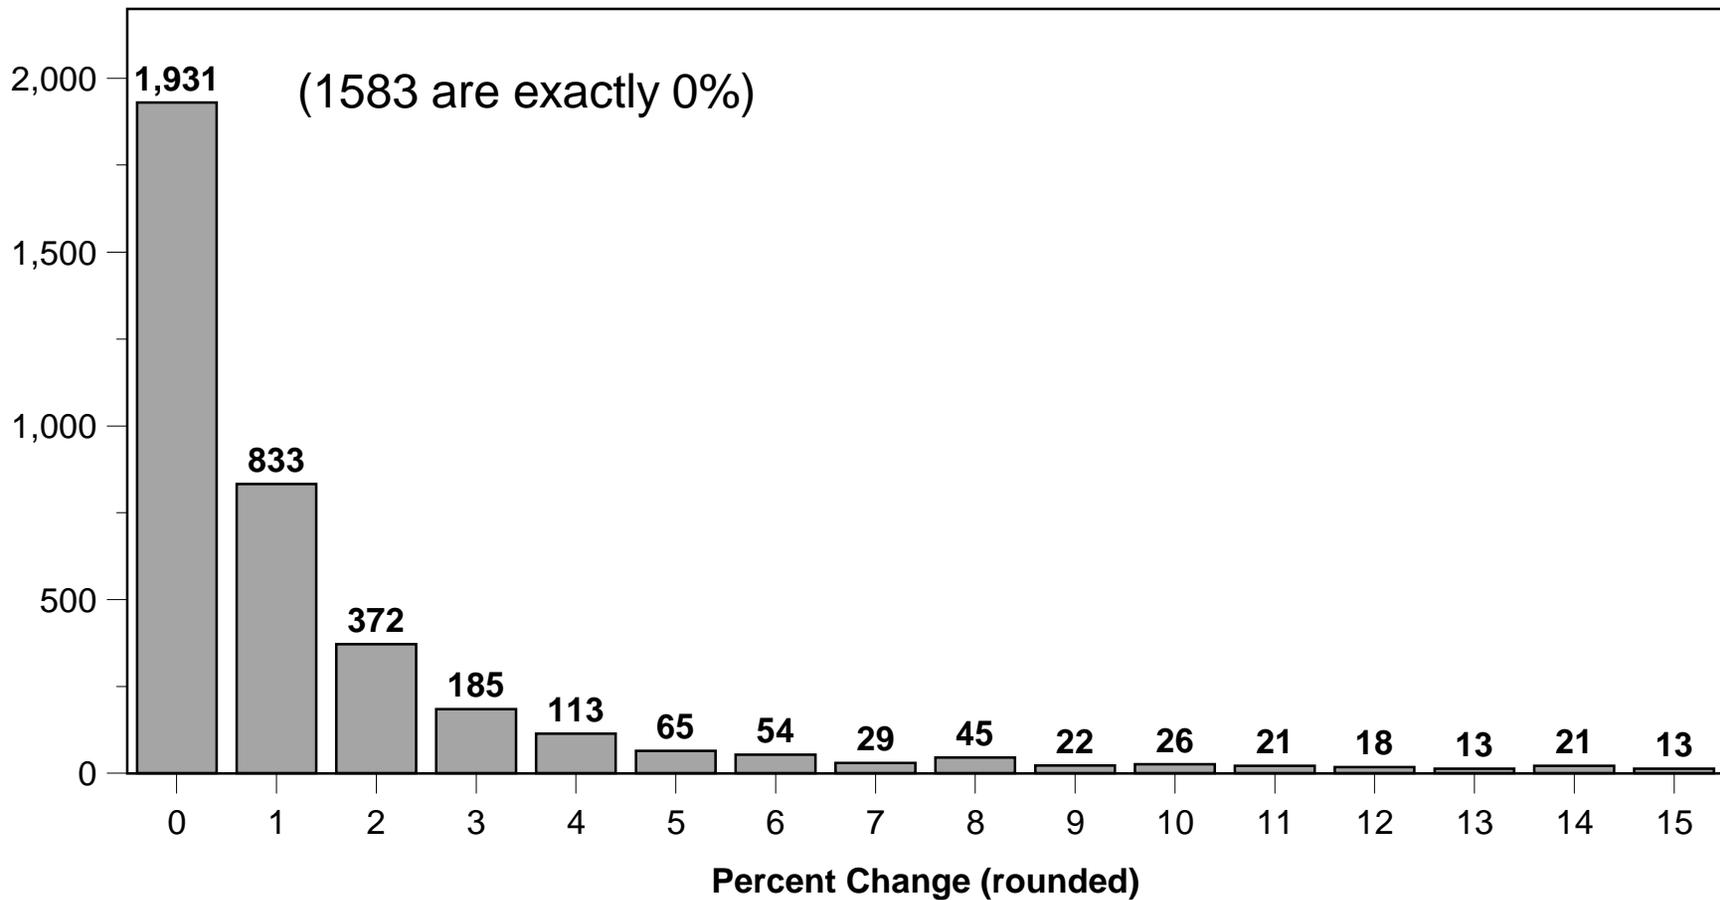

# Percent of Cases with Change of +5.5% or Less Comparing NIBRS to Summary UCR

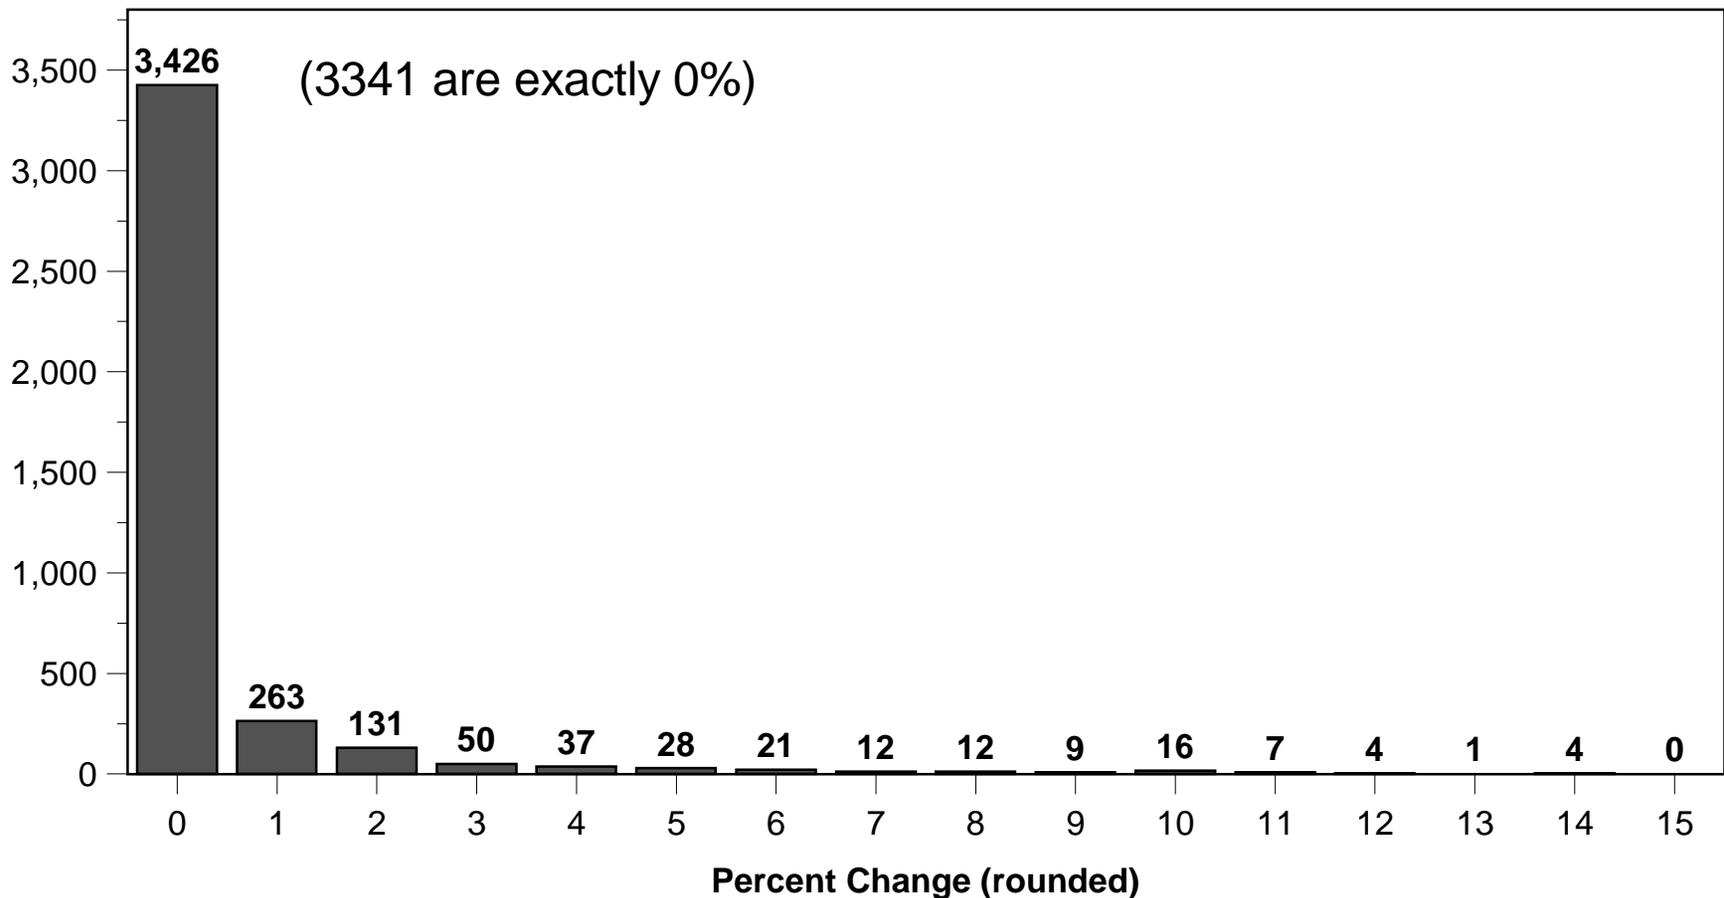

# Index Crime Rate Estimates: Changes from 0 to 15 Percent Comparing NIBRS to Summary UCR

Number of Cases

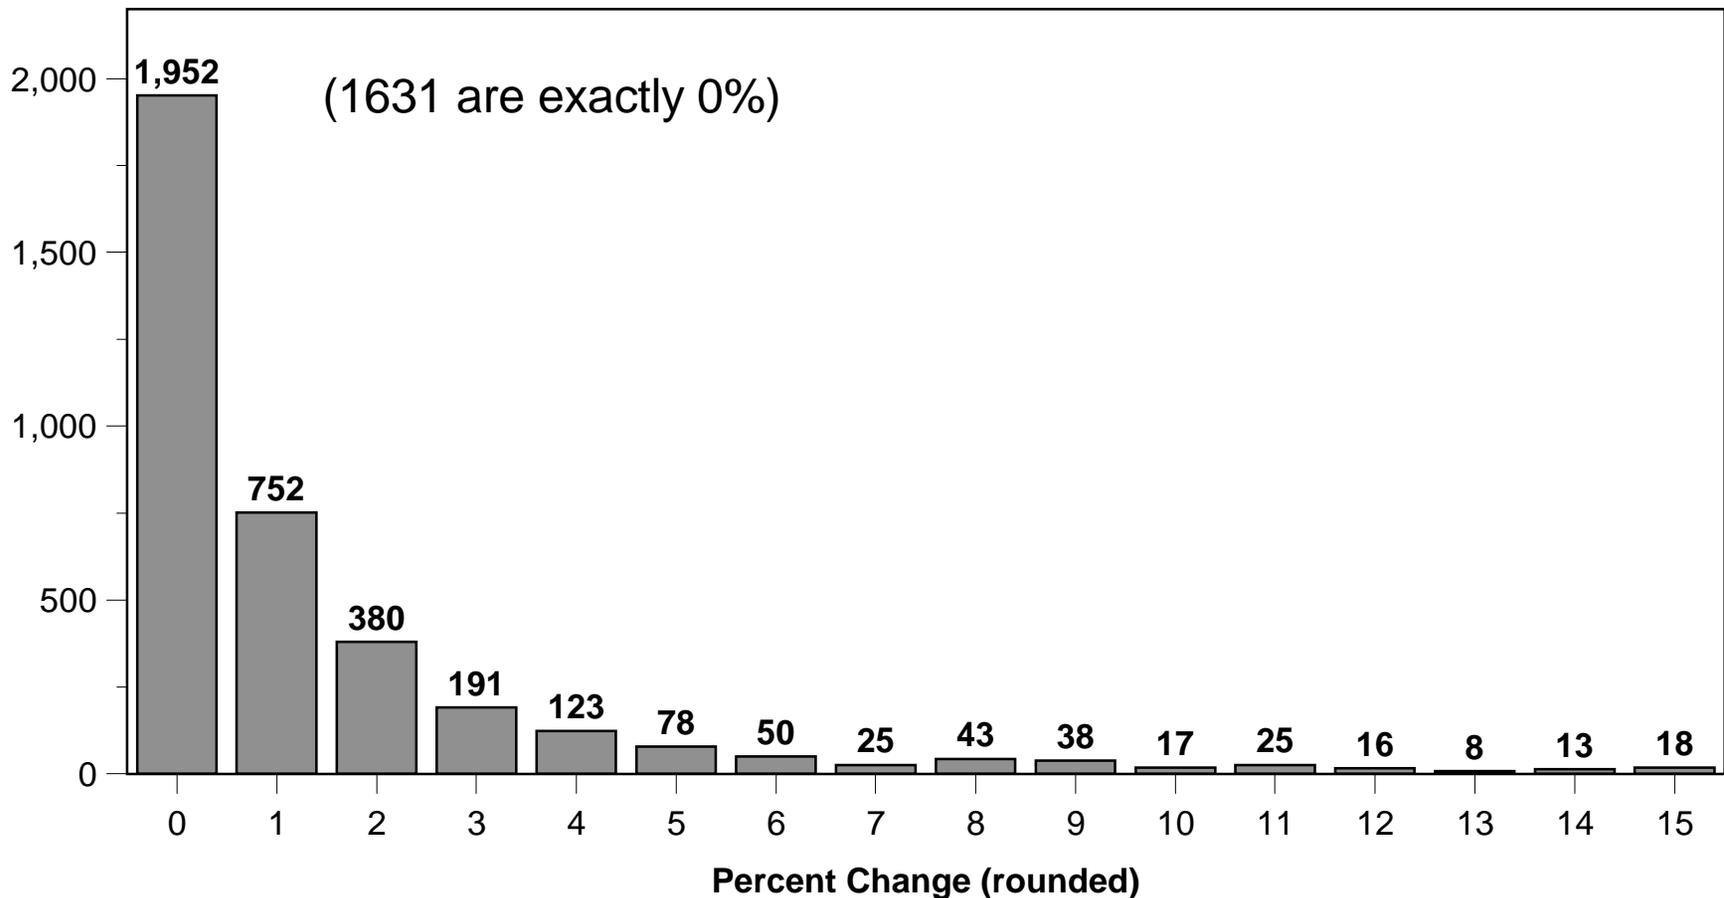

# Violent Crime Rate Estimates: Changes from 0 to 15 Percent Comparing NIBRS to Summary UCR

Number of Cases

# Property Crime Rate Estimates: Changes from 0 to 15 Percent Comparing NIBRS to Summary UCR

Number of Cases

# An Overall Look at Jurisdictions with Larger Populations

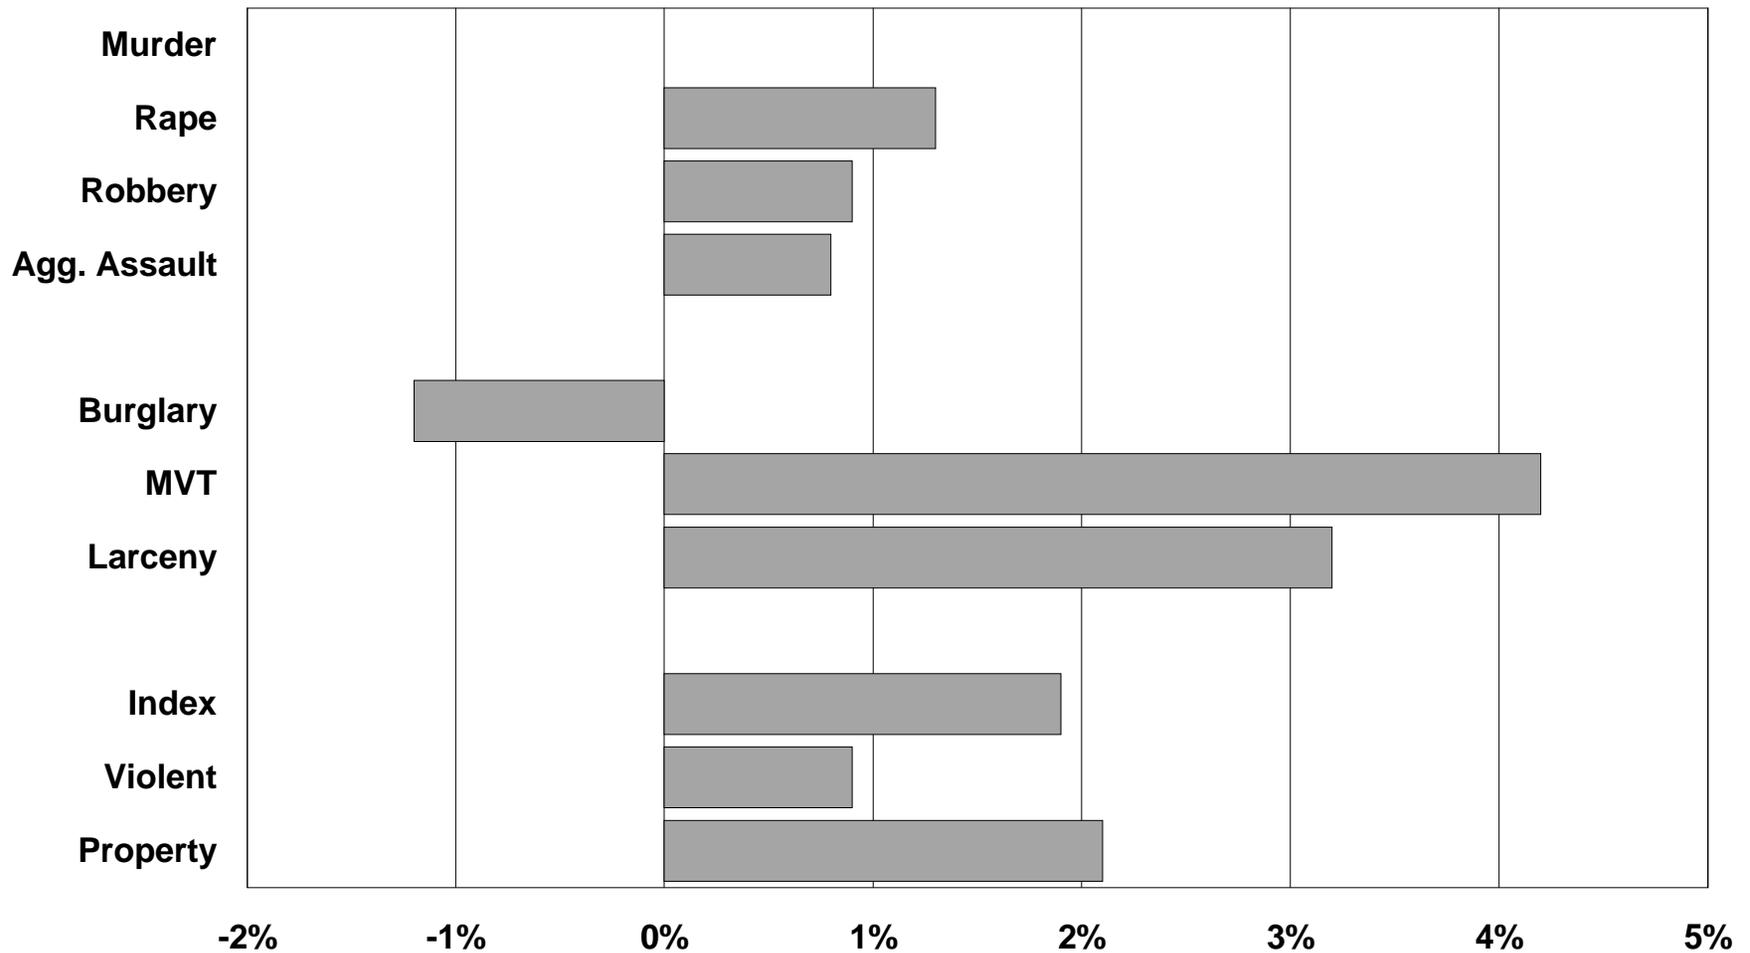

- Research looks at the effects of NIBRS on crime rate estimates for larger jurisdictions
- Research from the same aggregate count file selected cases based on the following criteria
  - full year NIBRS reporting
  - population over 25,000
  - no combined reporters
  - 378 cases were selected

# Jurisdictions population 25,000 or more

## Average percent difference in crime rates

### when reported through NIBRS

### rather than Summary UCR

# Jurisdictions 25,000-250,000 Population Difference in Violent Crime Rate Estimates Comparing NIBRS to Summary UCR

Percent of Cases

	Index	Violent	Murder	Rape	Robbery	Assault
Percent Difference						
Under - 5.5 %	0.5	0.0	0.0	0.0	0.0	0.0
- 5.5 to - 1.6 %	5.3	0.0	0.0	0.0	0.0	0.0
- 1.5 to - 0.6 %	3.2	0.0	0.0	0.0	0.0	0.0
- 0.5 to 0.5 %	31.5	51.9	100.0	84.1	71.4	65.9
0.6 to 1.5 %	39.2	29.1	0.0	0.8	10.8	16.9
1.6 to 5.5 %	15.8	17.4	0.0	8.0	13.5	14.8
Over 5.5 %	7.7	1.6	0.0	7.1	4.2	2.4
Exactly 0 %	6.3	39.2	100.0	84.1	69.8	51.6
<i>Highest Percent Difference</i>	<i>33.8%</i>	<i>10.0%</i>	<i>0.0%</i>	<i>50.0%</i>	<i>22.2%</i>	<i>11.4%</i>

# Jurisdictions 25,000-250,000 Population Difference in Property Crime Rate Estimates Comparing NIBRS to Summary UCR

Percent of Cases

	Index	Property	Burglary	MVT	Larceny
Percent Difference					
Under - 5.5 %	0.5	0.5	9.5	0.0	0.0
- 5.5 to -1.6 %	5.3	2.9	11.7	0.0	0.0
- 1.5 to - 0.6 %	3.2	2.6	7.1	0.0	0.0
- 0.5 to 0.5 %	31.5	33.6	37.6	23.8	41.8
0.6 to 1.5 %	39.2	34.1	23.5	9.3	30.2
1.6 to 5.5 %	15.8	18.0	10.6	36.2	16.6
Over 5.5 %	7.7	8.2	0.0	30.7	11.4
Exactly 0 %	6.3	7.9	24.6	23.0	12.2
<i>Highest Percent Difference</i>	<i>33.8%</i>	<i>37.5%</i>	<i>4.7%</i>	<i>25.0%</i>	<i>64.9%</i>

# Comparing NIBRS Counts with NIBRS Converted to Summary UCR

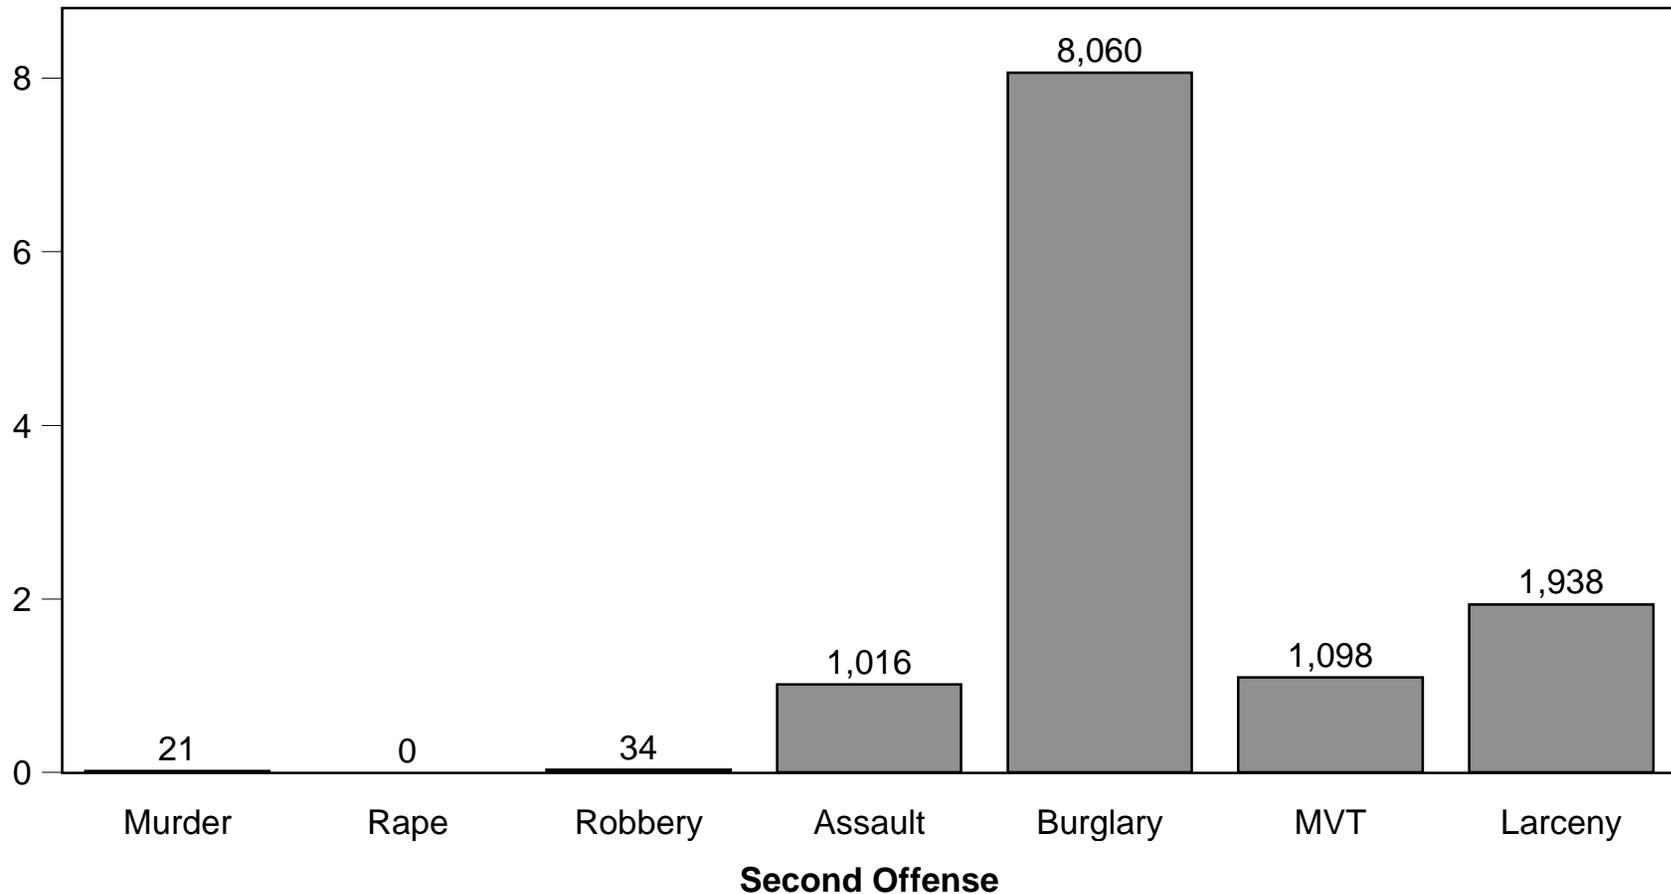

- Homicide - no difference
- Assault - NIBRS slightly higher
- Burglary - NIBRS may be lower or higher
- MVT - NIBRS can be substantially higher
- Larceny - NIBRS can be substantially higher

# Larceny

- Hierarchy Rule
- Some records include larceny segments contrary to FBI instructions
- Larceny reporting practices differ by state
- Records could be standardized in the national database through data processing

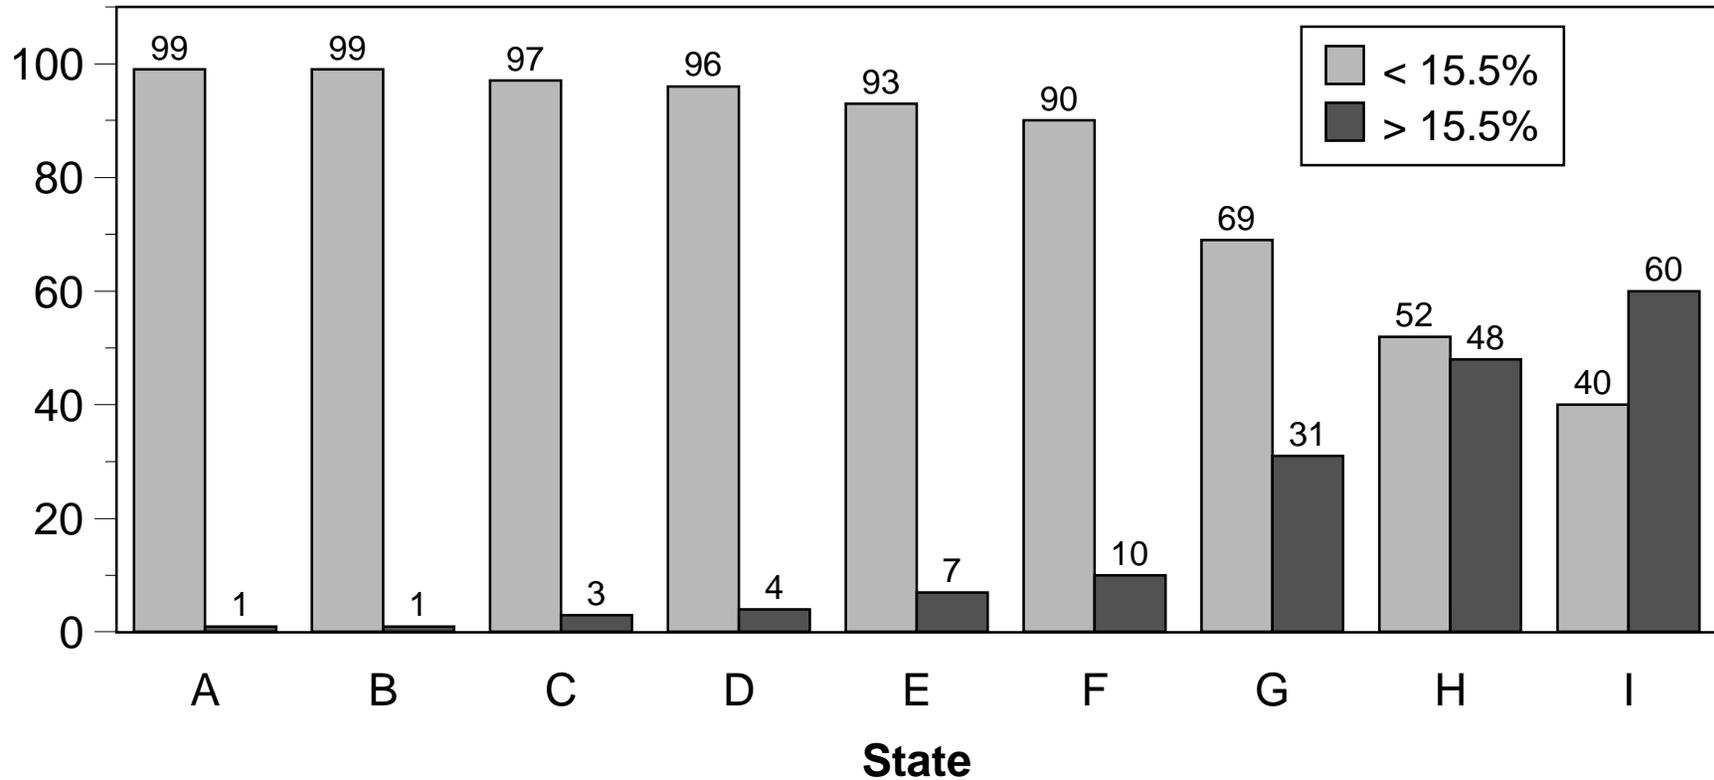

# Larceny with Second Offense One Victim and One Offender

Number of Incidents

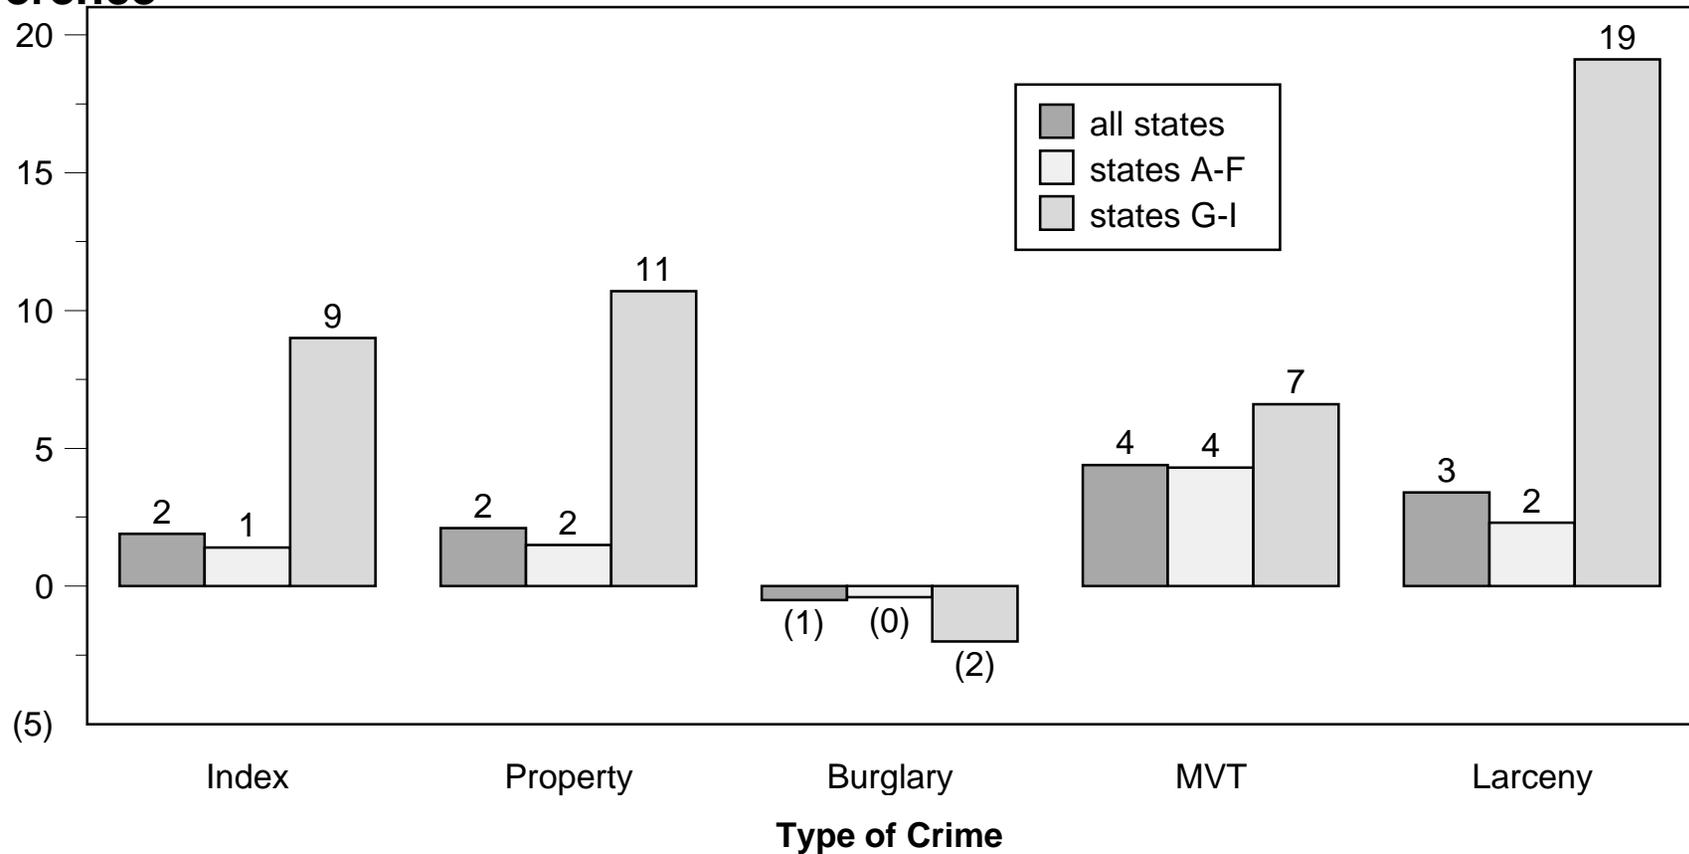

# Change in Larceny Rate Estimates Comparing NIBRS to Summary UCR

Percent of Cases

# Average Percent Differences in Property Crime Rate Estimates Comparing NIBRS to Summary Format

Percent  
Difference

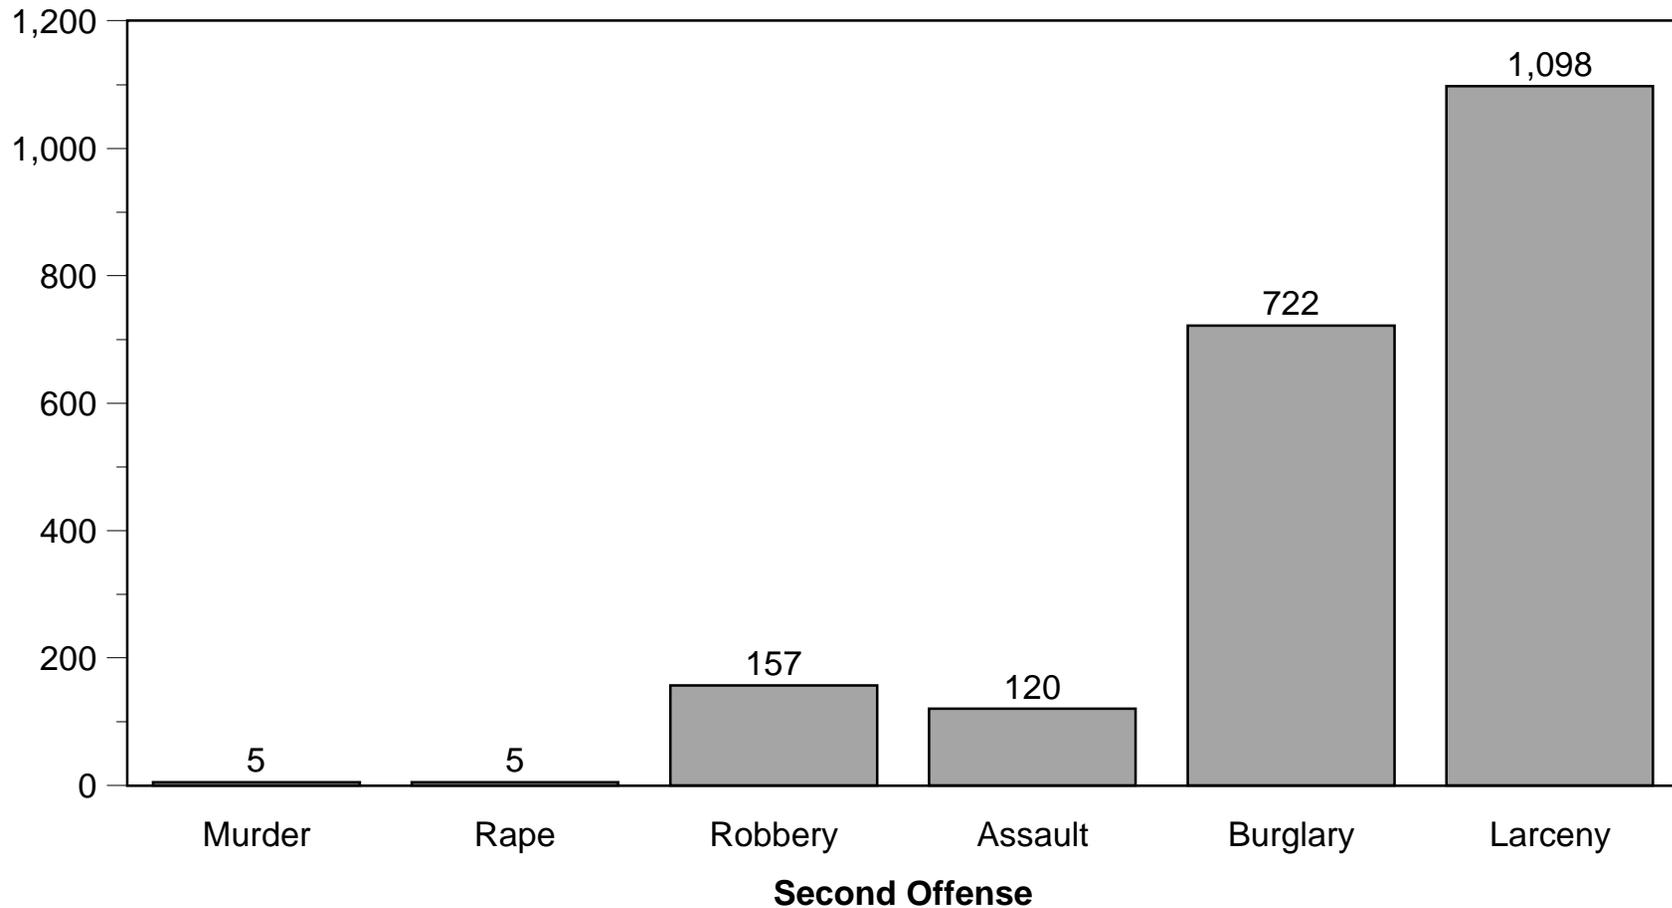

# Motor Vehicle Theft

- Hierarchy Rule
- Possible mis-application of Hierarchy Rule in Summary reporting
- More accurate reporting

# MVT with Second Offense One Victim and One Offender

Number of Incidents

# Assault

- Hierarchy Rule
- Possible effect of restructured definition
- More accurate reporting

# Aggravated Assault with Second Offense One Victim and One Offender

Number of Incidents
